PFERD industrial power brushes are quality tools for surface machining. We offer a comprehensive program of high-quality brushes for professional machining of various materials and applications. Within the PFERD program you can find the best brush for every application, for every machining problem and for every material.

## Advantages of PFERD brushes

- Special quality wires (oil tempered wire) with high flexibility and bending fatigue strength give long tool life.
  - High concentricity due to even distribution and secure fixing of the trim material.
  - Optimum finishing result, due to close matching of brush body and visible trim length.
  - Good value for money.

## How to find the best tool?

In order to help you find the optimal brush quickly we have compiled a chart on the following pages including the most important application and the best brushes for your task.

## ① Select trim material

First, the optimum trim material for the brush application is chosen to suit the material to be machined. The trim materials are colour-coded for easier recognition:

Steel wire	–	grey
INOX wire	–	blue
Brass wire	–	yellow
Plastic (SiC)	–	red

## ② Select filling type

According to the desired brushing effect you can choose between the filling types crimped filament, knotted or vulcanised.

## PFERD brush product lines

PFERD has two product lines to meet a variety of brushing tasks used in industry and crafts.

Performance line SG

Largest range of brushes for professional use  
in industry and crafts.

Special line SGP

The special line was developed for special industrial and high-performance applications. Everywhere where there are special demands, special line SGP brushes are the best choice. With the innovative knot-styles COMBITWIST® and SINGLETWIST®, PFERD offers you exclusive tool solutions to meet highest application demands.

## Industrial Power Brushes

Well Packaged and Presented

### Industrial packaging

PFERD provides industrial power brushes as part of their standard range, in robust industrial packaging units.

All brushes produced in packaging units of **50** pieces each are delivered in this industrial packaging.

### Advantages:

• Robust packaging suited to the product.  
• Easy to open and surface and EAN-code on the packaging.

• Guidelines for safe use in each brush pack.

### Individual packaging

PFERD also offers individual packaging of the most common **industrial power brushes** in individual packaging.

All brushes listed in packaging units of **50** pieces each are supplied in self-promoting individual packages.

### Advantages:

• Standard European standard hole pattern for optimum product presentation on your sales counter.

• Order number and EAN-code on the packaging.

• Guidelines for safe use on each brush pack.

• Popular types can be positioned effectively at a point-of-sale.

### Brush sets

PFERD provides three brush sets in various sizes and quantities for shop counters. They can also be effectively positioned in very small spaces.

### Order instructions

When ordering, please state the EAN or the order number and the quantity.

EAN 4002720150017

00 06 00 00 00 00 00 00

Ordering example

4002720150017 00 06 00 00 00 00 00 00

### Explanation of order example

00	Brush width d, [mm]
00	3 mm width d, [mm]
06	6 mm width d, [mm]
00	9 mm width d, [mm]
00	12 mm material width, [mm]
00	15 mm material width, [mm]
00	Performance line

### PFERD TOOL CENTER

All individually-packed brushes can be presented individually using a PFERD TOOL CENTER. This is a modular system which can be used to communicate all important information about the product and the point-of-sale.

PFERD also offers a counter display as an attractive sales promotion.

Are you planning to present PFERD brushes in a shop counter? If so, in what target group, where, perhaps you are planning a trade promotion? Our sales team will be happy to provide you with recommendations for an appropriate brush presentation.

208

## Special models

Should our comprehensive catalogue program prove insufficient for solving your particular application, we can produce quality, high-performance PFERD brushes on request.

We can produce for example other wire diameters and qualities, bores or threads or other dimensions as special designs. Please speak to our sales advisors! We are happy to help you!

### Suitable tool drives

■ For hand-held use

- Power drills
  - Flexible shafts
  - Straight and angle grinders with air or electric motors
  - Please refer to catalogue 209 for detailed information and ordering data on suitable drive systems.

For stationary machines

- CNC systems
  - Bench-top grinding machines (e.g. wheel stand grinders)

#### ■ For robotized machines

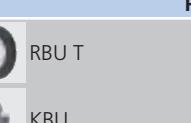

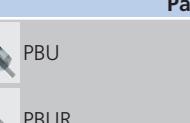

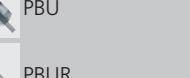

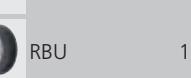

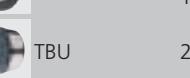

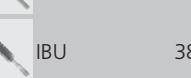

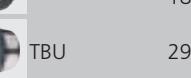

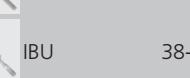

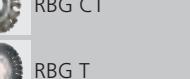

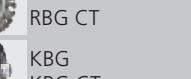

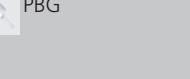

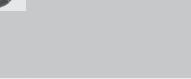

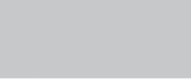

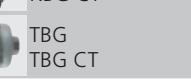

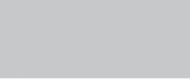

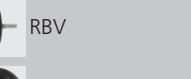

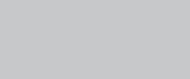

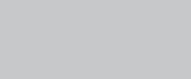

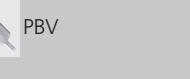

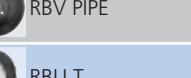

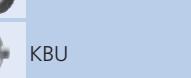

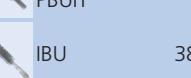

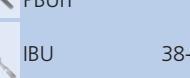

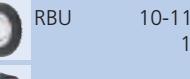

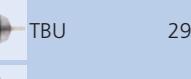

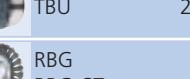

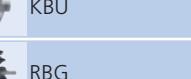

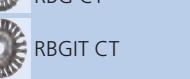

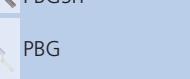

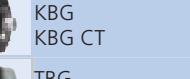

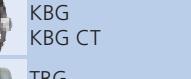

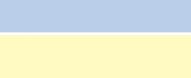

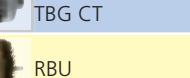

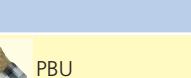

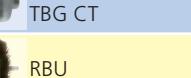

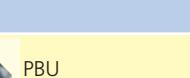

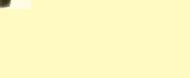

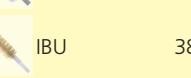

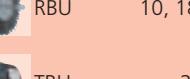

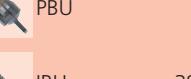

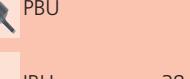

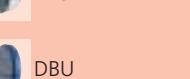

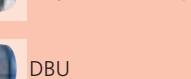

- mainly special types

### PFERD – Your partner for safe tools

PFERD industrial power brushes meet a high quality and safety standard which is constantly being inspected and further developed in our own laboratories. As one of the leading manufacturers of brush tools, PFERD fulfills the requirements of European standard EN 1083.

### Read the safety recommendations!

Technical brushes must be used in a proper manner. For this reason, guidelines on the safe and economic use of PFERD brushes are in every packaging unit. They advise you how to increase your personal work safety.

= Wear gloves!

= Wear a respirator!

= Wear hearing protection!

= Wear eye protection!

### Never exceed the permitted maximum RPM

In order to guarantee operating safety, the maximum permitted RPM written either on the brush, the label and in the catalogue must never be exceeded!

Please observe the following before use:  
The tool drive speed must not exceed the maximum permissible brush speed.

Please refer to our product information and product tables for further recommendations on optimum operating speeds. Here you can find the recommended speeds [RPM] for an optimum working result.

= Read the instructions!

Use a protective machine cover!

### Customer service

Should you have any questions, please contact your PFERD sales advisor. We can advise you locally free of charge and without obligation and will be happy to help you to find solutions to any application problems or answer any questions about the safe use of PFERD brushes.

### Determining the recommended speed

- ① Select brush type.
- ② Read recommended cutting speed.
- ③ Determine the speed using the brush dia. and cutting speed.

The recommended cutting speed ranges [m/s] depend on the respective application and lie below the allowed maximum cutting speed.

1	2
Pencil brushes	5 – 10 m/s
Cup brushes	25 – 35 m/s
Wheel brushes/ flaring cup brushes	see adjacent chart

### Solutions to problems

Problem	Solution
Inadequate brushing action	1. Increase RPM or use larger brush diameter at unchanged RPM. 2. Choose a brush with shorter trim. 3. Use a brush with thicker filaments.
Excessively strong brushing action	1. Reduce RPM or use smaller brush diameter at unchanged RPM. 2. Reduce contact pressure. 3. Choose a brush with longer trim. 4. Use a brush with thinner filaments.
Surface is too rough and irregular	1. Use a wider brush. 2. Select a brush with thinner filaments. 3. Reduce operating RPM.
Excessively fine finish/surface appears too polished	1. Select a brush with thicker filaments. 2. Use a brush with shorter trim. 3. Reduce operating RPM.
Secondary burr formation	1. Change brush-to-workpiece operating angle. 2. Select a brush with shorter trim. 3. Use a brush with thicker filaments.

### Recommendation for use

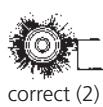

#### Brush diameter

With hand-held tool drives, the brush diameter should never exceed 180 mm, regardless of the fill material.

#### Contact pressure and work position

incorrect (1)

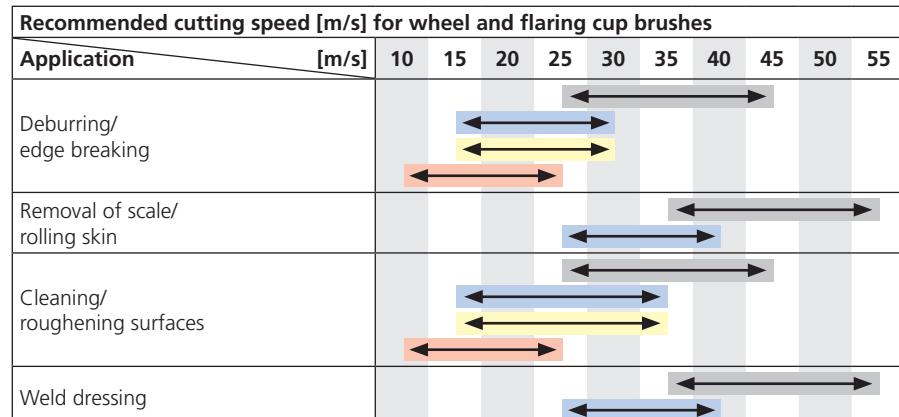

correct (2)

Abrasion is done by the filament tips (fig. 2).

#### Exception:

Brushes with SiC fill: approx. 2-3 mm of the filament tips grind. When using brushes on stationary machines, always operate below the brush centre line (see fig. 2).

The colour bars correspond to the colour code of the trim materials.

### ③ Cutting speeds [m/s]

n [RPM]	Brushes dia. $d_1$ [mm]

25.000	13	20	26	33	39	52	65	79										

Example

RBG 11512 Steel SG

Clean surfaces

Brush dia.  $d_1$ : 115 mm

Cutting speed: 30 m/s

Speed: 5.000 RPM

$\varnothing (d_1) \times \pi \times \text{Speed} (n)$

$1.000 \times 60$

#### Visible trim lengths

Short filaments give a stiffer fill surface, resulting in more aggressive brushing action. Longer filaments are more flexible, giving a softer brush performance that produces a more uniform finish, even on non-homogeneous surfaces.

#### Filament diameter

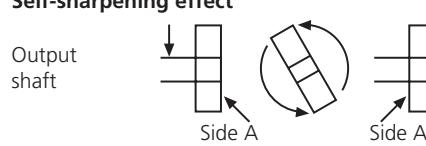

General rule:

**Thicker filament** = aggressive, powerful brushing action

**Thinner filament** = soft brushing action, finer surface finish

On a brush with thicker filaments, fewer filament ends are in contact with the workpiece surface at the same time. This results in a more aggressive brushing action and coarser surface finish. With thinner filaments, many filament ends are in contact. The result is a softer brushing action and finer surface finish. Generally, finer filament is more flexible and ensures a longer brush life.

#### Self-sharpening effect

The self-sharpening effect can be improved by changing the brush operating direction.

Due to its particularly good forming and welding qualities, its resistance against corrosion and its attractive appearance, stainless steel (INOX) is becoming increasingly popular for various products. These properties also place special requirements and demands on the tools used to machine it.

### PFERD wire qualities

In order to fulfil the particular requirements for machining INOX, PFERD uses a wire quality of 1.4310 (V2A) on all its INOX brushes. Practical experience gained from industrial use confirm that this wire quality achieves excellent corrosion resistance with optimum tool life.

The wire quality of 1.4310 in INOX brushes tends to become ferromagnetic after cold processing (can be attracted using magnets). The reason for this is a change in the microstructure caused through deformation (e.g. in wire drawing process). This change in microstructure and the resulting ferromagnetic qualities have no influence on the quality and corrosion resistance of the INOX wire. It retains its corrosion-resistant properties.

All PFERD brushes with INOX wire are marked blue and are suitable for use on all stainless steels (INOX), such as V4A.

### PFERD brushes INOX-TOTAL type

We offer a range of PFERD "INOX-TOTAL" type brushes for the most demanding of operating conditions. These brushes have been specially developed for stainless steel work and are characterised by the fact that, all brush parts are made from stainless steel, quality 1.4310 (V2A), ensuring optimum corrosion protection.

Please refer to pages 36-37 for detailed information and ordering data.

### Stainless Steel (INOX) processing competence

PFERD provides a comprehensive range of tools which meet the demands for work on stainless steel. We are happy to help in finding solutions to your application problems. The PRAXIS "PFERD Tools for the Use on Stainless Steel" contains many valuable recommendations for use. Our experienced sales advisors are happy to answer your questions. Please contact us.

### Standard INOX wire qualities

AISI	Short no. acc. to EN 10027-1	Material no. acc. to EN 10027-2
304	X5CrNi18-10	1.4301 (V2A)
301	X10CrNi18-8 (current standard)	1.4310 (V2A)
302	X12CrNi 17-7 (previous standard)	1.4310 (V2A)
316	X5CrNiMo17-12-2	1.4401 (V4A)
316	X3CrNiMo17-13-3	1.4436 (V4A)
316Ti	X6CrNiMoTi17-12-2	1.4571 (V4A)

#### Note

To avoid possible problems, it makes sense to run preliminary tests to check the corrosion-resistance of the workpiece.

#### Finishing

General cleaning of the workpieces after brushing is recommended to prevent loose particles sticking to the workpiece. For workpieces that are used in a heavily corrosive environment, processing with grinding tools or etching or passivation is recommended. This also applies when not only stainless steels but also non-alloyed steels are processed and it cannot be completely ruled out that particles will land on the stainless steel. For detailed information and ordering data on grinding and polishing tools please refer to catalogue 204.

### Avoiding corrosion when brushing INOX components

Cause of corrosion	Solution
Structure changes through toothng heat build-up.	Avoid the heat build-up through: ■ Use of a lower speed. ■ Reduction in brushing pressure. ■ Oscillating brushing.
Apart from the trim all other brush parts are generally made of steel, (exception: INOX-TOTAL brush types), corrosion can occur through contact between these parts with the workpiece.	■ Use INOX-TOTAL type brushes. ■ Avoid contact between the side discs and workpiece. ■ Use pencil brushes with plastic coatings.
Using the same tool for work on steel and INOX.	■ Do not use brushes which have already been used on steel, copper or other metals. ■ Do not process steel near INOX.
Wire particle residues in the surface (crack corrosion).	■ Avoid a high brushing pressure. ■ Select a low speed.
Material removal rate is too low	Complete removal of structural changes by: ■ Extending brushing times. ■ Using grinding tools.

### Industrial packaging

PFERD provides **industrial power brushes** as part of their standard range, in robust industrial packaging.

**All brushes produced in packaging units of 5 or 10 pieces each are delivered in this industrial packaging.**

#### Advantages:

- Robust packaging suited to the product.
- Order number and EAN-code on the packaging label.
- Guidelines for safe use in each brush package.

### Individual packaging

PFERD also provides a selection of the most common **industrial power brushes** in individual sales promotion packaging.

**All brushes listed in packaging units of 1 piece are supplied in sales-promoting individual packages.**

#### Advantages:

- Useful European standard holepattern for optimum product presentation on your sales wall.
- Order number and EAN-code on the packaging label.
- Guidelines for safe use on each brush package.
- Popular types can be positioned effectively at a point-of-sale.

### Brush sets

PFERD provides three brush sets in sales-promoting display boxes for shop counters. They can also be effectively positioned in very small spaces.

### Order instructions

When ordering, please state the EAN or the complete order number.

#### Ordering example

EAN 4007220153017  
RBU 3006/6 ST 0,20 SG

#### Explanation of order example

RBU	= Wheel brush, single filament type
30	= Brush dia. $d_1$ [mm]
06	= Trim width $b$ [mm]
/6	= Shank dia. $d_3$ [mm]
ST	= Trim material steel
0,20	= Wire dia. $d_6$ [mm]
SG	= Performance line

### PFERD TOOL CENTER

All individually-packed brushes can be presented highly effectively using a PFERD TOOL CENTER.

The information and symbol card system can be used to communicate all important information on PFERD brushes at the point-of-sale.

PFERD also offers a counter display as an attractive sales promotion.

Are you planning to present PFERD brushes in a special way or to a particular target group, perhaps you are planning a sales promotion? Our sales advisers will be happy to help with recommendations for an appropriate brush selection.

# Wheel Brushes

## Wheel Brushes with Arbor Hole, Individual Filament Type

**RBU = Wheel brushes,  
individual filament type, slim type**

Excellent for medium-duty brushing (hand-held or stationary) of large surface areas.

Packaging unit: 1 piece

**Recommendation for use:**

Tool contact pressure should be kept low.  
Ensure that workpiece contact is made by wire ends only. Please mind arbor hole diameter.

**Ordering example:**

In order to change the arbor hole dia., please use the adapter set AK 32 (EAN 4007220**608593**).  
**Exception:** brushes with dia. 100 and 125 mm cannot be used with adapter set AK 32.

BO 8/12-22,2 5-18 (EAN 4007220**751923**) is suitable for all slim brushes up to dia. 150 mm with arbor hole.

For safety reasons, the use of arbors is limited for brushes with max. dia. 150 mm!

Please refer to pages 43-44 for detailed information and ordering data on matching adapter systems and accessory parts.

## Wheel Brushes with Arbor Hole, Individual Filament Type

Excellent for medium-duty brushing (hand-held or stationary) of large surface areas.

Packaging unit: 1 piece

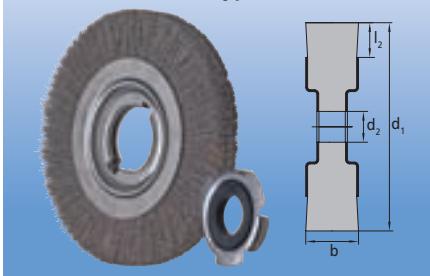

**Recommendation for use:**

Tool contact pressure should be kept low.  
Ensure that workpiece contact is made by wire ends only.

**Ordering example:**

EAN 4007220**658710**  
RBU 10020/14,0 ST 0,30 SG

**RBU = Wheel brushes,  
individual filament type, extra wide**

An adapter set AK 32-2 is included with each brush order. Arbor holes contained in set in mm (inches): 31,75/20/18/14/12/25,4 (1)/22,2 (7/8)/19,2 (.750)/16 (5/8), 12,7 (1/2).

Adapter set AM 51 can also be used on applications with high heat development and applications of force.

**Exception:** Brushes with dia. 100 and 125 mm are supplied with variable arbor holes 22,2/18 and 14 mm. It is not possible to use the adapter set AM 51.

RBU 30040 is supplied with arbor hole 50,8 mm. The arbor hole can be reduced to the required dimension using the adapter set AM 51.

Please refer to pages 43-44 for detailed information and ordering data regarding appropriate adapter systems and accessory parts on pages 43-44.

BO 8/12-22,2 5-18 (EAN 4007220**751923**) is suitable for RBU 10020 and 12520, BO 8/22,2 5-10 (EAN 4007220**751930**) for RBU 10028 and 12528 and BO 12/22,2 10-30 (EAN 4007220**561317**) for RBU 15025 and 15038.

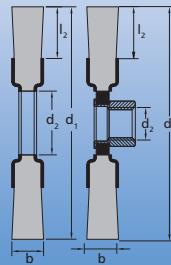

For safety reasons, the use of arbors is limited for brushes with max. dia. 150 mm.

# Wheel Brushes

## Wheel Brushes with Arbor Hole, Knotted Type

**RBG = Wheel brushes, knotted type**

For heavy-duty metalworking applications (descaling, rust removal, deburring, weld dressing, removal of adhesive residue).

The knotted type wire is more aggressive than crimped wire.

Packaging unit: 1 piece

**Recommendation for use:**

Optimal use with high-power output angle grinders.

**Ordering example:**

BO 8/22,2 5-10  
(EAN 4007220751930) is suitable for all knotted type wheel brushes (RBG) up to dia. 125 mm with arbor hole 22,2 mm.

BO 12/22,2 10-30  
(EAN 4007220561317) is suitable for all knotted type wheel brushes (RBG) dia. 150 mm and arbor hole 22,2 mm.

For safety reasons, the use of the arbors is limited for brushes with max. dia. 150 mm!

Please refer to pages 43-44 for detailed information and ordering data regarding matching adapter systems and accessory parts.

For heavy brushing work in metal construction e.g. scale removal, rust removal, deburring, cleaning of weld seams, removal of adhesives. The knotted type wire is more aggressive than crimped wire.

**Advantages of the COMBITWIST® knot style:**

- Smooth operation, even on corners and edges.
- No "recoiling" of the brush on edges.
- Enhanced tool life.
- Increased stock removal rate.
- Prevention of the knotting becoming "unravelled" in use.

Packaging unit: 1 piece

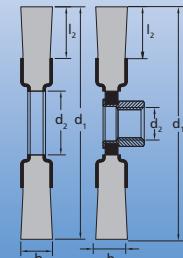

**Recommendation for use:**

Optimal use with high-power output angle grinders.

Please refer to pages 43-44 for detailed information and ordering data on appropriate adapter systems and accessory parts.

# Wheel Brushes

## Wheel Brushes for Angle Grinders, Individual Filament Type

**RBU = Wheel brushes  
individual filament type,  
for use on angle grinders**

Suitable for medium-heavy brushing (scale removal, rust removal, light deburring, cleaning of welding seams).

Individual filament type brushes are more flexible and produce a finer surface compared to knotted type. They are not as aggressive as kotted types.

### Recommendation for use:

Suitable for use on angle grinders. For optimal performance, use RPM adjustable angle grinders.

### Ordering example:

**RBV PIPE = Wheel brushes,  
knotted type, pipeline, encapsulated**

The extremely slim brush design and hard encapsulation material [E4, E5] combine to provide high precision control and very aggressive grinding in hard-to-reach areas (e.g. when dressing root and cover passes of V-groove welds).

Packaging unit: 10 pcs.

#### **Recommendation for use:**

Suitable for use on angle grinders (up to 80 m/s).

#### **Ordering example:**

EAN 4007220**751428**  
RBV 17806/22,2 PIPE ST 0,35 E4 SG

#### **Hardness grade E3 (highly aggressive)**

Aggressive enough for most applications. Best grade for general use.

colour: green

#### **Hardness grade E4 (extremely aggressive)**

For higher pressure applications and excessive heat.

colour: black

#### **Hardness grade E5 (extremely aggressive)**

Super aggressive, tough cleaning, for most severe applications.

colour: blue

Suitable for heavy brushing work in pipeline and container construction.

The extra slim design of these brushes is perfect for work in hard-to-reach areas (e.g. root weld seams).

Highly aggressive and robust brush, which is able to withstand large mechanical loads.

**Advantages of the COMBITWIST® knot style:**

- Smooth operation, even on corners and edges.
- No "recoiling" of the brush on edges.
- Enhanced tool life.
- Increased stock removal rate.
- Prevention of the knotting becoming "unravelled" in use.

Packaging unit: 10 pcs.

**Recommendation for use:**

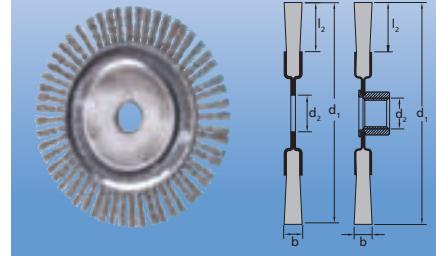

Optimal use with high-performance angle grinders.

# Wheel Brushes

## Deburring Brushes, Individual Filament Type

**RBU = Wheel brushes, individual filament type, deburring brush**

Particularly suitable for deburring pipes, cut edges and small parts on stationary machines. Brushes with cord wire fillings (LIT = cord brass-plated steel wire) are suitable for heavy brushing work. In comparison to crimped filament type brushes, this special wire construction allows even more aggressive brushing.

### Recommendation for use:

Suitable for use on all commercially available stationary deburring machines.

### Ordering example:

EAN 400720807040

**RBU = Wheel brushes, individual filament type, deburring brush**

Deburring brushes with SiC filling are particularly suitable for deburring complicated components e.g. cylinder heads or gear toothings. The longer trim length and therefore higher flexibility make this product ideal for work on complex components made of aluminium.

### Recommendation for use:

Basically for use on stationary machines, machining centres and robots.

## Wheel Brushes for Stationary Use, Individual Filament Type

Suitable for light-to-medium brushing work in stationary machines.

Rugged wheel brush with short, dense fill for general shop use.

Packaging unit: 1 piece

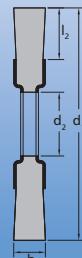

**Recommendation for use:**

Thanks to their variable arbor hole diameter these brushes can be mounted in any standard drive unit. Developed for use on bench grinders.

**Ordering example:**

EAN 4007220**658918**  
RBU 15020 T/AK51 ST 0,20 SG

**RBU T = Wheel brushes with variable arbor hole, individual filament type, for stationary use**

An adapter set AK 51 (EAN 4007220**608609**) is included with each brush order.

**Arbor holes contained in set in mm (inch):**  
32, 20, 18, 14, 12  
25,4 (1), 22,2 (7/8), 16 (5/8), 12,7 (1/2)

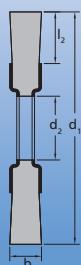

Please refer to pages 43-44 for detailed information and ordering data regarding appropriate adapter systems and accessory parts.

# Wheel Brushes

## Wheel Brushes with Arbor Hole, for Stationary Use, Knotted Type

**RBG T = Wheel brushes, knotted type, for stationary use**

Suitable for all medium-heavy brushing work in stationary and automated applications (e.g. deburring work).

Soft brush effect due to special knot style.

Packaging unit: 1 piece

**Recommendation for use:**

Suitable drive systems: stationary machines, bench grinders.

**Ordering example:**

EAN 4007220**530795**  
RBG 15016 T/22,2 ST 0,30 SG

## Wheel Brushes for Burnishing Machines, Individual Filament Type

Ideal for surface structuring of large-area workpieces.

PFERD offers three different trim materials to suit different requirements:

**Steel wire (cord wire):**

Brushes with cord wire are suitable for very heavy brushing work. The special wire construction produces an aggressive brushing action.

**Stainless steel (INOX) wire**

Brushes with stainless steel (INOX) fillings are suitable for structuring stainless steel (INOX) workpieces.

**Plastic (SiC)**

Brushes with SiC fillings are suitable for structuring steel, stainless steel (INOX) and wood and are suitable for fine deburring of bores and cut outs on large-area parts.

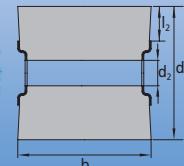

**Recommendation for use:**

Optimum operation with burnishing machines.

**Ordering example:**

EAN 4007220**773086**  
WBU 100100/19,1 ST 0,27 LIT SG

**WBU = Wheel brushes for burnishing machines, individual filament type**

High-performance electric grinding drum drive in a set with PFERD tools for cleaning, dash-dot matting and finest grinding of large surfaces, particularly on stainless steel (INOX).

Please refer to catalogue 204 for detailed information and ordering data regarding further roller/drum tools and sets.

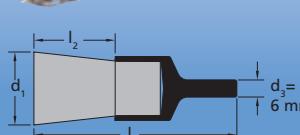

Please refer to catalogue 209 for detailed information and ordering data on suitable roll drives.

# Mounted Pencil Brushes

## Mounted Pencil Brushes, Individual Filament Type

**PBU = Mounted pencil brushes, individual filament type**

Suitable for all light-duty brushing tasks. The wires or filaments spread out (fill expands) as the brush rotates. Ideal for deburring, cleaning and rust removal of even hard-to-reach surfaces, e.g. inside bores and cavities, become accessible in this manner.

**Recommendation for use:**  
Minimum recommended drive output  
300 watts.

**Ordering example:**  
EAN 4007220**530887**  
PBU 1010/6 ST 0,20 SG  
Please state the required wire dia.

## Mounted Pencil Brushes, Encapsulated

Suitable for medium-heavy brushing work. The brushes are used face side. This intensifies the brushing effect.

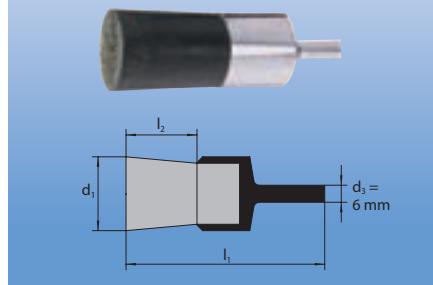

The brush should be used face down to achieve the best abrasive effect. Face-down spot grinding gives best access to recesses and bores (Hardness grade E3 for universal use). The steel fill is encapsulated in plastic for closely focused brushing.

Please refer to page 16 for detailed information on hardness grades.

**Recommendation for use:**

Minimum recommended power 300 watts.

**PBV = Mounted pencil brushes, encapsulated**

# Mounted Pencil Brushes

## Mounted Pencil Brushes, with Limiting Rings

PBUR = Mounted pencil brushes, individual filament type, with limiting rings

Suitable for light brushing and ideal for deburring, cleaning and rust removal. The removable plastic rings provide convenient control of fill spread and flexibility. The brush can thus be ideally focused on hard-to-reach spots, e.g. inside bores and cavities.

**Recommendation for use:**  
Recommended drive power 300 watts.

## Mounted Pencil Brushes, Knotted Type

PBGS = Mounted pencil brushes, knotted type, SINGLETWIST®

Particularly flexible single-knot brush for special applications. Developed for work on inside corners.

The knot design is twisted against the brush running direction. This prevents the brush from unravelling during operation.

#### Ordering example:

EAN 4007220**659267**

PBGS 1010/6 ST 0,20 SGP

Please state required wire dia.

# Mounted Wheel Brushes

## Mounted Wheel Brushes, Knotted Type

**RBG = Mounted wheel brushes, knotted type**

For brushing in hard-to-reach grooves and recesses. Also suitable for cleaning, rust removal and weld finishing.

The knotted type wire is more aggressive than crimped wire.

**Recommendation for use:**  
Minimum recommended drive output  
500 watts.

**Ordering example:**  
EAN 4007220153161  
RBG 7006/6 ST 0,35 SG

## Mounted Wheel Brushes, Encapsulated

**RBV = Mounted wheel brushes, encapsulated**

For medium-duty localized brushing. Particularly suitable for use in closely focused brushing.

The wires are encapsulated in plastic (Hardness grade E3 for universal use). This provides a more precise operating focus.

Please refer to page 16 for detailed information on hardness grades.

**Recommendation for use:**  
Minimum recommended power 300 watts.

### Steel wire, performance line SG

COMBIDISC® is a comprehensive range for surface machining. From rough stock removal and surface structuring right up to face-down mirror polishing, solutions can be found for the most complicated of machining problems.

The COMBIDISC® brush is perfectly suited for the removal of soft materials such as adhesive, underbody coatings and for cleaning contours and edges.

Please refer to catalogue 204 for detailed information and ordering data regarding COMBIDISC® brush.

### COMBIDISC® brush

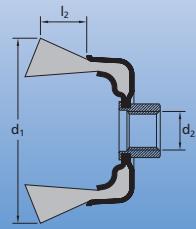

# Cup Brushes with Threaded Hole

## Cup Brushes with Threaded Hole, Individual Filament Type

**TBU = Cup brushes,

# Cup Brushes with Threaded Hole

## Cup Brushes with Threaded Hole, Knotted Type

Excellent for heavy-duty brushing, mainly on large surfaces, and for deburring, cleaning and rust removal.

Highly aggressive brush. The version with supporting ring prevents filaments from escaping sideways. The ring is removed once the fill is worn down to that level, whereupon the rest of the brush can be used up normally.

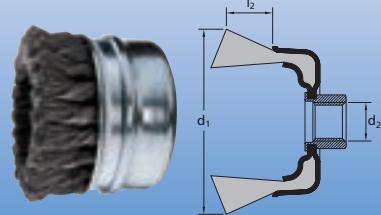

### Recommendation for use:

Optimal use with high power output angle grinders.

### Ordering example:

EAN 4007220**153437**  
TBG 65/M14 ST 0,35 SG

# Cup Brushes with Threaded Hole

## Cup Brushes with Threaded Hole, Knotted Type

**TBG CT = Cup brushes, knotted type, COMBITWIST®**

Excellent for difficult brushing work, mainly on large surfaces. Suitable for deburring, cleaning and rust removal.

Highly aggressive brush.

### Advantages of the COMBITWIST® knot style:

- Smooth operation, even on corners and edges.
- No "recoiling" of the brush on edges.
- Enhanced tool life.
- Increased stock removal rate.
- Prevention of the knotting becoming "unravelled" in use.

### Recommendation for use:

Optimal use with high power output angle grinders.

### Ordering example:

# Flaring Cup Brushes with Threaded Hole

## Flaring Cup Brushes with Threaded Hole, Individual Filament

Excellent for medium-heavy brushing work. Suitable for deburring, cleaning and rust removal. The flaring cup shape of the brush body makes it easier to work in hard-to-reach areas e.g. inner edges, grooves, keyways.

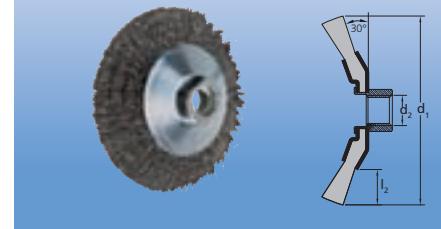

### Recommendation for use:

Suitable for use on angle grinders (up to 80 m/s). Optimal operation with adjustable speed angle grinders.

### Ordering example:

EAN 4007220 **220832**  
KBU 10010/M14 ST 0,35 SG

# Flaring Cup Brushes with Threaded Hole

## Flaring Cup Brushes with Threaded Hole, Knotted Type

**KBG CT = Flaring cup brushes, knotted type, COMBITWIST®**

Excellent for heavy-duty brushing, deburring, cleaning and rust removal.

Due to its conical shape, this product is ideal for work in hard-to-reach places. It is versatile and especially useful for difficult work. The knotted type wire is more aggressive than crimped wire.

### Advantages of the COMBITWIST® knot style:

- Smooth operation, even on corners and edges.
- No "recoiling" of the brush on edges.
- Enhanced tool life.
- Increased stock removal rate.
- Prevention of the knotting becoming "unravelled" in use.

Packaging unit: 1 piece

### Recommendation for use:

Optimal use with high-power output angle grinders.

### Ordering example:

Particularly suitable for deburring and surface machining on stationary machines.

**Recommendation for use:**

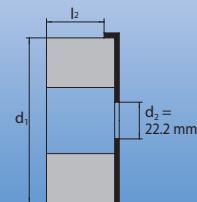

Suitable power sources: mainly stationary use on CNC machines, machining centres and with robot systems. When processing surfaces disc brushes with round SiC filling should be used.

On applications which place particular demands on high brush aggressiveness, disc brushes with rectangular SiC fillings (REC) should be used. Suitable for work on aluminium.

**Ordering example:**

EAN 4007220**808740**  
DBU 100/22,2 REC SiC 80 1,14 SG

**DBU = Disc brushes, individual filament type**

(EAN 4007220**808894**) is suitable for all disc brushes (DBU) with dia. 125 and 150 mm.

Please refer to page 44 for detailed information and ordering data regarding arbors.

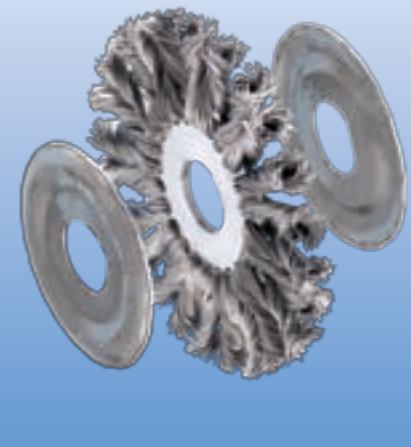

For detailed information please refer to the PRAXIS "PFERD Tools for Use on Aluminium".

# Brushes INOX-TOTAL

## Brushes INOX-TOTAL

**Wheel brush with arbor hole  
INOX-TOTAL**

### PFERD brushes INOX-TOTAL type

PFERD also offers brushes "INOX-TOTAL" as well as brushes with INOX fillings for machining stainless steel.

This design is characterised by the fact that not only the trim material, but rather all parts of the brush are made from stainless steel in quality 1.4310 (V2A). These brushes are perfectly suited for applications in extremely critical surroundings and for difficult conditions in the chemical and construction industries, or in the foodstuffs or nuclear industries.

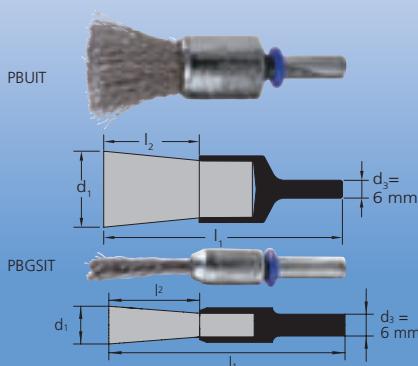

Please refer to page 8 for further information on machining stainless steel (INOX) and PFERD brushes in the INOX-TOTAL type.

**Circular brush with shank  
INOX-TOTAL**

**PBUIIT = Mounted pencil brushes,  
individual filament type**

**PBGSIT = Mounted pencil brushes,  
knotted type**

Pencil brushes suitable for work in hard-to-reach places such as bores, hollow space and inner corners.

Individual filament type pencil brushes, PBUIIT design, are suitable for all light brushing work. As they rotate, the wires spread out (fill expands).

Knotted brushes, PBGSIT type, are mainly used to work on inside corners. The knot design is twisted against the brush running direction. This prevents the brush from unravelling during operation.

**Ordering example:**  
EAN 4007220**808382**  
PBUIIT 1516/6 INOX 0,15 SGP

### Stainless steel (INOX) wire, special line SGP

Knotted type wheel brushes are suitable for heavy brushing work such as scale removal, rust removal, deburring and cleaning of weld seams. The slim design RBGIT PIPE is especially suitable for work in hard-to-reach areas e.g. root weld seams.

#### Advantages of the COMBITWIST® knot style:

- Smooth operation, even on corners and edges.
- No "recoiling" of the brush on edges.
- Enhanced tool life.
- Increased stock removal rate.
- Prevention of the knotting becoming "unravelled" in use.

Packaging unit: 1 piece

#### Recommendation for use:

Optimum operation with high power output, adjustable speed angle grinders.

# Interior Brushes

## Interior Brushes

**IBU = Interior brushes with threaded hole**

Particularly suitable for deburring and cleaning of pipes, threads, coupling sleeves and cylinders.

In addition to the thread, interior brushes up to 20 mm have a shank fixture allowing them to be clamped into 6 mm collets. Interior brushes with 3/8 threads are also equipped with a shank fixture of 10 mm.

### Recommendation for use:

Developed for applications with low speeds of up to 1.000 RPM.

**SWG = Quick change handles**

Suitable for manual work with interior brushes. Quick change handles can also be combined and supplemented with the IBUV extensions. Please refer to the table "Combination possibilities" on page 39 for the possible length combinations.

The quick change handle of SWG-6 contains a collet in which tools with a shank dia. of 6 mm can be clamped.

All collet group 10 collets can be used. Please refer to catalogue 209 for detailed information and ordering data regarding collets.

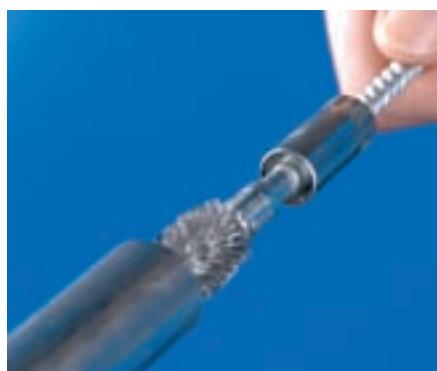

### Ordering example:

EAN 4007220721803

SWG-M6

Please state the required thread.

Order No.	Thread				Overall length l <sub>1</sub> [mm]		
	M6	3/8	1/2	Collet 6 mm			
	EAN 4007220						
SWG- ...	721803	723036	749333	-	135	1	0,119
SWG-6	-	-	-	723043	150	1	0,143

In order to work in hard-to-reach areas using interior brushes, extensions (IBUV) with wire stems (IBUS) or quick change handles (SWG) are used.

Please refer to the table "Combination possibilities" for the possible length combinations.

Outer dia. screw socket  
M6 = 12 mm, 3/8 = 12 mm, 1/2 = 16 mm.

**Ordering example:**

EAN 4007220**726884**

IBUV M6 300

Please state required thread.

**IBUV** = Extension for interior brushes  
**IBUS** = Wire stem for interior brushes

Order No.	Thread			Overall length $I_1$ [mm]		
	M6	3/8	1/2			
	EAN 4007220					
IBUV ... 300	726884	726891	750032	300	1	0,230
IBUV ... 1000	660782	660799	750049	1000	1	0,358
IBUS ... 300	726907	726914	750094	300	1	0,219
IBUS ... 800	660805	660812	750100	800	1	0,108

Extension	SWG [mm]	IBUS 300 [mm]	IBUS 800 [mm]
<b>without</b>	135	300	800
<b>IBUV 300</b>	435	600	1.100
<b>IBUV 1000</b>	1.135	1.300	1.800

### Combination possibilities

Interior brushes can be lengthened by extensions and wire stems.

IBUV extensions can be combined with one another to give an overall length of more than 1.800 mm.

### Example:

Required total length 1.300 mm can be attained with IBUV 1000 (Extension) + IBUS 300 (wire stem).

Especially suitable for brushing work in hard-to-reach areas such as inner pipe surfaces, bores, nozzles etc. in manual applications.

Nylon filling without abrasive grit.

**Ordering example:**

The adapters change the arbor hole sizes to the required dimensions. The brush is prevented from slipping through during operation due to the positive fit.

#### **AK 32**

With adapter set AK 32 wheel brushes (RBU), slim type, can be used on all standard machines.

**Set comprises the following arbor holes in [mm (inch)]:** 20, 18, 14, 12  
25,4 (1), 22,2 (7/8), 19,2 (.750), 16 (5/8), 12,7 (1/2)

Please refer to page 10 for detailed information and ordering data on the appropriate brushes.

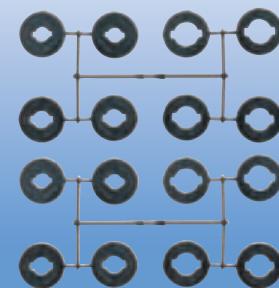

#### **AK 32-2**

With adapter set AK 32-2 wheel brushes (RBU), wide type, can be used on all standard machines.

**Set comprises the following arbor holes in [mm (inch)]:** 20, 18, 14, 12  
25,4 (1), 22,2 (7/8), 19,2 (.750), 16 (5/8), 12,7 (1/2)

Please refer to page 11 for detailed information and ordering data on the appropriate brushes.

#### **AM 51**

With adapter set AM 51 wheel brushes (RBU), wide type, can be used on all standard power sources.

An adapter pair consists of 2 individual adapters.

Please refer to page 11 for detailed information and ordering data on the appropriate brushes.

#### **Recommendation for use:**

Particularly suitable for applications which produce a lot of heat and high pressure. For applications that generate less heat and low pressure, please use the adapter set AK 32-2.

#### **Exception:**

Wheel brushes with dia. 100 and 125 mm cannot be used with the adapter pair.

# Accessories

## Accessories

### Arbor for wheel brushes

Allows the use of wheel brushes with holes to be fitted on drive units with collet chucks e.g. electric straight grinders, flexible shaft drives. Please refer to catalogue 209 for detailed information and ordering data regarding tool drives.

### Safety recommendations:

For safety reasons, use of arbors is limited to brushes with max. dia. 150 mm!

**Arbor for wheel brushes  
BO 8/12-22,2 5-18**

**BO 8/12-22,2 5-18** is suitable for all:

- individual filament wheel brushes (RBU) up to dia. 150 mm, slim (page 10)
- individual filament wheel brushes (RBU) 10020, wide (page 11)
- individual filament wheel brushes (RBU) 12520, wide (page 11)
