The PFERD program includes air-powered, electrical and flexible shaft drives for hand-held applications such as grinding, milling, brushing, cutting and polishing.

The machines shown on the following pages are sorted according to power source,
 ■ machine type,
 ■ speed and
 ■ power output.

They are listed according to RPM as follows:

- Air-powered machines from 100.000 to 3.500 RPM
- Electric machines from 33.000 to 750 RPM
- Flexible shaft drives from 25.000 to 0 RPM (with overdrive unit 36.000 RPM).

Contents	Page
Flexible shaft drives and accessories	
	
Flexible shafts	80-91
	
Multi-speed machines with gears	68-79
	
Multi-speed machines with stepless regulation	69, 71, 75
	
Special handpieces	87-92
■ Flexible special handpiece	
■ Belt grinder	
■ Drum grinder, straight type	
■ Drum grinder, angle type	
	
Tool drive accessories	93-97
	
Personal protective equipment (PPE)	
	
Safety glasses, protective gloves, ear protection, breathing protection	98-99

The most important prerequisite for cost effective working methods is the selection of the optimal tool. After this, the choice of a suitable tool drive can be made.

The following points have to be taken into consideration:

- Design, shape and size,
- speed,
- power output and
- tool adapter.

The selection is also influenced through

- accessibility of the place being worked on,
- mobility and
- availability of air power or electrical power supply.

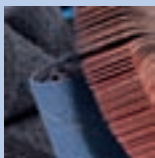

The following table provides you with an overview of suitable drives for the tools shown in the catalogues.

Your PFERD sales advisor as well as the technical customer service engineers can help you find an individual solution to any specific application problem.

Safety regulations

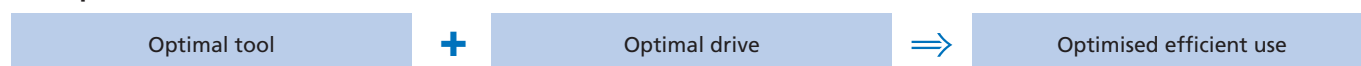

Read the instructions!
= (Please always observe the respective valid safety regulations!)

Selection of the Optimal Drive

Principle:

PFERD catalogues 202 - 208 provide a multitude of possibilities, allowing you to choose the best tool for your application. In order to apply these tools with optimum efficiency, you need a tool drive perfectly matching the chosen product.

The tool drives are especially conceived for grinding, milling, brushing, cutting and polishing. They cover all relevant speed and power output performance ranges and accord with the latest requirements in ergonomics and safety. They are also reliable and have long service lives.

In order to find the most cost effective solution to your application problem, always choose the machine matching the most suitable tool.

The PFERD program contains three drive types:

Air grinders	Electric grinders	Flexible shaft drives
		
Applications and economic efficiency		
Single workplace, stationary use	Single workplace, stationary use or on assembly sites	Single workplace, stationary, with a variety of tool applications
High-power output, efficient use of air, rugged, durable slide vane and turbine motors	High-power output, low wear ensures maximum service life	Very sturdy and durable, low wear ensures maximum service life
Drive types		
Straight grinders	Straight grinders	Straight grinders
Angle grinders	Angle grinders	Angle grinders
Belt grinders	Belt grinders	Belt grinders
-	Drum grinders	Drum grinders
Special drives	-	Special drives
Machine characteristics		
No risk of overloading, resistant until motor cuts off	Overload protection, can briefly withstand up to four times the nominal output	Overload protection, can briefly withstand up to six times the nominal output
Optimal RPM/power ratio	Optimal fine tuning for use of tools possible	Optimal fine tuning for use of tools possible
Good construction size to power output ratio	Higher power output compared to air-powered machines of the same speed	High motor outputs, compact handpieces, efficient power transmission to the tool
Higher RPM's available	Very speed-stable, ideal for tools that require constant speeds	Coverage of large speed ranges
Ergonomics/handling		
Machine size and shape suitable for many applications	Ergonomic machine shapes, easy-handling	Light, easy-to-handle handpiece, for low-fatigue work
Speed range [RPM]		
3.500 - 100.000	750 - 33.000	0 - 40.000
Speed variation		
Single rotation speed	Stepless, electronic	Stepless, electronic, alternatively using gears
Energy		
Compressed air (6,3 bar)	1-phase AC	1-phase AC 3-phase AC
Power range [W]		
75 - 1.000	500 - 1.530	500 - 2.700
Safety		
Safe energy form, no sparking	Safeguard to prevent unintentional re-starting	42 volt version suitable for protected use
Maintenance		
Simple exchange of worn parts	Simple exchange of carbon brushes	Maintenance can be performed by qualified technicians

PFERD repair service

PFERD provides a quick maintenance service so that downtimes for defective machines are kept as short as possible. Please contact your local PFERD sales service. You will receive a detailed quotation to aid you in making your decision. If the maintenance costs exceed 70 % of the reinstatement value, you will also receive a quotation for a new machine.

Technical changes

Further technical developments and ergonomic improvements are consistently included in our design and manufacture. We therefore reserve the right to make technical changes to our products. If we change our constructional designs, we generally guarantee that spare parts will remain available for four years after the change.

Guarantee

Within the scope of the PFERD guarantee, we take liability for deficiencies in air-power,

electric and flexible shaft drives as well as for accessories by repairing or replacing those parts which are defective at our discretion free of charge. We guarantee this entitlement to replacement and repair for a maximum of 12 months unless the law states that the time limits should be longer.

We undertake no liability for damages occurring within this time due to unprofessional handling, use of other replacement parts or maintenance in other workshops.

Air grinders are the "top speed" machines amongst the drives. They achieve higher speeds in comparison to electric or flexible shaft drives. They have – when measured against their smaller size – a high power output. The robust and resistant sliding vane and turbine motors have a long service lifetime as well as being easy to service.

Areas of application

Air grinders are very versatile. They are used especially in medium and large sized companies that have a compressed air network at their disposal.

Criteria for selecting the optimum air grinder

The most important prerequisite for cost effective work is the selection of an optimal tool. After this, the choice of a suitable tool drive can be made. The following points have to be taken into consideration.

1. Design, shape and size

Every type of application places a specific demand on the shape and size of the tool drive. The various designs can be used for many different tasks: Depending on the dimensions, accessibility, type and frequency of the application, the ideal drive can be selected for the task in hand.

2. RPM

The drive should always be selected according to the RPM and cutting speed recommendations for the tool. Please refer to catalogues 202 - 208 for these recommendations.

They are used economically and reliably in series production and assembly lines.

PFERD product range

PFERD offers straight, angle and belt grinders as well as special drives. PFERD air grinders are technically up to date and contain the latest ergonomic findings and requirements. They have been developed especially for the economic application of abrasives and cutting tools with defined geometries and cover a wide range of speeds (3.500 - 100.000 RPM) and performances (75 - 1.000 watts).

3. Power output

The drive unit's power output is the deciding factor for maintaining the RPM under load. The load is determined from the material to be machined, cutting capability of the tool and the grinding pressure.

4. Tool adapter

Depending on the PFERD tool you have selected, different tool adapters are available e.g. collets or threaded spindles. Every machine is allocated with matching collets. Please refer to pages 94-95 for an overview of the collets and spindle extensions.

We have explained the most important criteria here. Should you have any further questions, your PFERD sales advisor will be happy to help.

Advantages

- Compact, ergonomic designed shape.
- Low weight.
- Technically up to date.
- High power to weight performance.
- Versatile in use.
- Single speed RPM.
- No danger from overloading, can be loaded up to machine standstill.
- Housing insulated against cold and vibration.
- Low-maintenance.
- Easy to service.
- Cost effective.

Operates with or without oil

Turbine and sliding vane motors are labelled as follows:

	Use only without oil.
 	Operates with or without oil.
	Use only with oil.

Advantages of oil-free compressed air

- User-friendly, protecting both people and the workshop environment.
- Reduces operation costs, because oil and fittings can be dispensed with.
- Avoids oily precipitation on the workpiece.

Recommendations and prerequisites for an economically efficient use of air grinders

1. Air pressure

The machine should be run at an air pressure of 6 - 6,3 bar. A sufficient flow rate must be continuously ensured. Over-pressure leads to premature and higher levels of wear.

2. Air consumption

All data in this catalogue refers to air consumption in m³ per minute [m³/min]. This is the volume of the air when expanded to atmospheric pressure. Unless otherwise indicated, the air consumption figures stated are always for a pressure of 6 bar and the maximum consumption of the machine in question. Non-regulated, pneumatic devices have the highest consumption at idling speed. Centrifugal-force controlled air-powered machines have the highest air consumption under full load.

3. Rotational speed (RPM)

All speeds are stated in revolutions per minute [RPM] and refer to the idling speed at a pressure of 6 bar. In the case of non-controlled machines, the speed under full load is approx. 50 % of the idling speed with centrifugal force-controlled machines the speed under full load is approx. 80 to 90 %.

4. Oil mist lubrication

An adequate oil mist lubrication is of crucial importance for proper machine operation should the machine require oil. For special lubricating oil, see page 97.

5. Machines running on oil-free compressed air

Machines marked oil-free can be used without oil mist lubrication. Units which can operate with or without oil have a minimal reduction in RPM/output performance when used without oil.

6. Maintenance unit

It is recommended to install a complete maintenance unit (dirt filter + pressure reducer + oiler) at a distance not exceeding 5 m from the machine.

The size of the filter pores should be 3 - 5 µm. If in humid environments, air-powered machines should not be operated without oil.

7. Microfilter

Small high-speed grinders (approx. 40.000 RPM and over) should be used with a microfilter instead of the regular dirt trap.

8. Air supply hose

The supply hose must have an inner diameter that at least corresponds to those stated for the drives.

9. Valves and fittings

Always use extra fittings such as hose nozzles, self-closing valve couplings etc. with the largest possible inner diameter. It is advisable to use not more than one valve coupling to prevent unnecessary pressure losses.

10. Noise level

Air tool operators must always wear hearing protection, as the process noise emission of the machines exceeds 85 dB(A) in many cases, even though the idling noise of the machine remains clearly below this value. For ear protectors, see page 99.

11. Vibrations

PFERD air tools meet the requirements of the EC machinery directive regarding vibrations from hand-held or hand-guided machines. This is achieved through:

- Precise concentricity,
 - vibration damping intermediate layers,
 - vibration-insulated housings.
- For protective gloves see page 99.

12. Maintenance and safety

- We recommend
- to service the drives at regular intervals and
 - to wear personal protective equipment found on pages 98-99.

Use only without oil.

- For fine milling, grinding and engraving work.
- Turbine motor, use without oil only!
- Comes with air supply hose.
- Light, easy to handle.
- Spindle bearing ensures high concentricity.
- Holds like a pen.
- Front exhaust deflects chips.

If required, please order separately:

- Complete connecting set no. 1 (see page 52).
- In-line fine filter SFI 1/4-5 EAN 4007220809013.

Air Grinders

Straight Grinder, Speed: 38.000 RPM / Output: 220 Watts

PG 3/380 DH

Use only with oil.
2 drops per minute.

- Compact design, convenient in use.
- Handles lightly, like a pen.
- Low vibration, protecting people, tools and machine.
- Safety ring lever throttle (DH) protects against inadvertent start-up.

If required, please order separately:

- Complete connecting set no. 2 (see page 52).
- In-line fine filter SFI 3/8-8 EAN 4007220809020.

ø 50 mm

ATADISC® abrasive discs
AD 5005, AD 7505

with **clamping device**
AF 1/4 AD SP 35 for **ATADISC®**
hub SP 35 and
backing pad ST 50 or ST 75

Can be used with or without oil.
4-5 drops per minute.

- Max. tool dia. up to 115 mm.
- For light grinding and cutting work.
- Silencer.
- With spindle lock pin.
- Comes with air supply and exhaust hose.
- Safety lever throttle.
- Low angle head height.
- Operation without oil mist lubrication
 - Workplace-friendly
 - No oil precipitation onto the tool
 - No negative effects on oil-sensitive materials e.g. ceramic, wood, plastic.
- Consistent RPM /power output during operation with or without oil mist lubrication.

If required, please order separately:

- Complete connecting set no. 3 (see page 52).
- In-line fine filter SFI 3/8-9 EAN 4007220809044

Rigid extensions for air-power motors

Rigid extensions for air motors

Combined with air motors, the ideal solution for tough applications e.g. during cleaning or milling work on large hard-to-reach workpieces in foundries.

In series production, rigid extensions are frequently used. They are adapted exactly to the workpiece geometries. Other lengths and bend radii are available on request.

For detailed information and ordering data regarding diamond files for handheld filing machines please refer to cat. 205.

Marking pen MST 31

**Use only with a little oil.
1 drop every 5 minutes.**

- This air-power marking pen is patented and works with approximately 3 times the frequency in comparison to other air-power operated marking pens.
- Incl. tungsten carbide engraving needle.
- Low vibration in hand operation.
- Used to make markings and labels on metal, glass, plastics and also on hardened tool steel (needle gauge fine).
- Keys and air supply hose are included in delivery.

If required, please order separately:

- Complete connecting set no. 1 (see page 52).
- In-line fine filter SFI 1/4-5
EAN 4007220809013.

How to choose the correct connection fittings for your air-power machine

In general, PFERD air grinders with "rear exhaust" are supplied with air supply and exhaust hose. Air grinders with "front exhaust" are generally supplied with fixed screw-on nozzles, matching the required inner dia. compressed air hose.

Many accessory parts fit to several machines, they have been sorted into the groups 1-5. Please refer to the tables for the order number of the matching accessory parts.

Connection sets

The complete connection set nos. 1-4 for the individual air grinders are allocated in the table below. Please refer to the table on page 52 to find out the connection set contents.

Electric tool drives are universal “all-rounders”. In relation to their size and weight they offer a high performance. They are particularly suitable for use with grinding tools that require a constant RPM.

Application

Electric grinders can be used for nearly every application. They are successfully used in many industries for different processes. The stepless electronic speed adjustment allows the use of various types of tools on one single machine.

Electric grinders are not suitable

- for boiler construction
- or in very dusty conditions.

The PFERD product range

PFERD provides a wide range of electric straight, angle, belt and drum grinders. PFERD electric grinders are of the highest technological standard and accord with the latest ergonomic knowledge and requirements. They were specially developed for economic use of grinding, milling, brushing, cut-off and polishing tools, and cover a broad range of speeds (750 - 33.000 RPM) and power outputs (500 - 1.500 watts). PFERD electric grinders have an electronic speed control for constant RPM values.

Equipment/Special features

- **Smooth start up:**
The electronically-regulated Smooth start up ensures a jolt-free start-up preventing machine wear.
- **Under voltage protection/restart protection:**
Should the power supply fail, PFERD electric grinders do not start up again inadvertently. Only after they have been switched off and on again will the machine restart.
- **Current limiting/blocking protection:**
On double nominal current input, the grinders switch off for approx. 0,2 seconds. By removing the load, the grinder is able to take up the initial RPM again.
- **Temperature overload protection:**
When a critical temperature is reached, the safety electronic system switches into cooling mode. The machine must not be placed under loads when in cooling mode. The machine will only start at the set working RPM after it has been switched on and off.

Advantages

- Compact, ergonomic design and shape.
- Low weight.
- Technologically up to date.
- High power output.
- Versatile use.
- Simple power supply.
- Low-maintenance.
- Easy to service.
- Cost effective.

Standards, safety, general information

PFERD electric machines bear

- the CE symbol,
- are totally insulated and comply with protective class II.

PFERD electric machines comply with

- the EC Machinery Directive,
- EC Low-Voltage Directive and
- Electromagnetic Compatibility.

National regulations must be observed.

Criteria for selecting the optimal electric grinder

The most important prerequisite for cost effective work is the selection of an optimal tool. Then a suitable drive can be chosen. Please take the following into consideration:

1. Design, shape and size

Every type of application places specific demands on the shape and size of the tool drive. The different designs can be used for various applications: The ideal drive should be selected for the task in hand depending on the dimensions, accessibility, type and frequency of the application.

2. RPM

The tool drive should always be selected according to the RPM and cutting speed recommendations for the tool.

Please refer to catalogues 202 - 208 for these recommendations.

3. Power output

The tool drive's power output is the deciding factor for maintaining the RPM under load. The load is determined from the material to be machined, cutting capability of the tool and the grinding pressure.

4. Tool adapter

Depending on the PFERD tool you have selected, different tool adapters are available e.g. collets or threaded spindles. Every machine is allocated with matching tool mounts. Please refer to pages 94-95 for an overview of the collets and spindle extensions.

Special Features

- Particularly suitable for milling and grinding work with tungsten carbide burrs and mounted points.
- Totally insulated. 
- High power output straight grinder with stepless speed adjustment.
- Smooth start up for the protection of people, tools and machine.
- Digital electronic speed control.
- Electronic overload switch-off, restart protection on power failure.
- Robust, comfortable ergonomic design.
- Optimum machine guidance due to long spindle housing.

Electric Grinders and Accessories

Electric Straight Grinder, Speed: 9.000 RPM / Output: 500 Watts

UGER 5/90 SI

Special Features

- Totally insulated.
- Stepless RPM adjustment.
- Easy-operation due to side switch.
- High power output, extremely easy to handle machine.
- Digital electronic ensures a constant RPM even under load.
- Smooth start up for the protection of people, tools and machine.
- Electronic switch-off on extreme overload, restart protection on power failure.
- Robust, easy to service construction.
- Especially suitable for POLINOX®/POLIVLIES® tools.

Order No.	EAN 4007220	RPM	Voltage 50-60 Hz	Power input [watts]	Power output [watts]	Incl. collet dia. [mm]	kg

Flexible shaft drives are multiple speed machines. They cover a wide RPM range and can be adjusted steplessly electronically or over gears to match individual tool requirements. Flexible shaft drives have an extremely high power output. They can also be used with the compact handpieces or extensions for work in hard-to-reach places.

Applications

Flexible shaft drives can be used for almost all jobs. They are used successfully in many industrial sectors for different processes. The RPM adjustment allows the use of various tools on one single machine.

Standards, safety, general guidelines

Electrical safety

PFERD flexible shaft drives comply with the standard "Safety for Hand-guided Motor-driven Electric tools".

1. Electric motor units with protective earthing (class I)

This constructional design accords with the PFERD flexible shaft drives:

- Mini-Mammoth Electronic (page 71)
- Quint (page 73)
- Mammoth Electronic (page 75)
- Mammoth (page 77)
- Master Grinder (page 79)

2. Totally insulated electric motor units (class II)

This design feature is indicated by the insulation sign  and the supplement "SI":

- RUER 5/250 SI (page 69)
- RUER 10/250 SI (page 69)
- RUG 19/120 SI (page 69)
- RUER 8/180 SI (page 71)

The PFERD product range

PFERD offers various types of flexible shaft drives as well as a comprehensive range of matching flexible shafts, handpieces, angle drives, drum and special drives.

PFERD flexible shaft drives and their accessories are extremely robust, technically up to date and are built according to the latest ergonomic knowledge and specifications. This programme was developed especially for the economic use of grinding, milling, brushing, cut-off and polishing tools and cover a wide range of speeds (0 - 40.000 RPM) and outputs (500 - 2.700 watts).

3. Safety extra-low voltage/protective separation

- When using AC voltage, in boilers, tanks, pipelines and similar narrow spaces made of electrically conductive materials, a safety extra-low voltage of 42 volts or protective separation must be used.

3.1 Electric motor units for safety extra-low voltage (class III)

These machines are operated with maximum 42 volts. The following are available in 42-volt models:

- Quint (page 73)
- Mammoth (page 77)
- Master Grinder (page 79)

3.2 Electrically protective separation

For flexible shaft tool drives, one alternative to an extra-low voltage system is to isolate the drive motor from the mains voltage using a transformer of the same voltage rating.

Advantages

- Extremely compact and ergonomic handpieces.
- Extremely low-weight handpieces.
- Extremely robust drives designed for permanent operation.
- Technically up to date.
- Extremely high power output.
- Extremely versatile.
- Simple power supply.
- Low-maintenance.
- Easy to service.
- Cost effective.

PFERD electric grinders comply with the

- EC Machinery Directive
- Low Voltage Directive
- Electromagnetic Compatibility

PFERD electric grinders bear the CE marking.

Please observe any special or country-specific regulations (e.g. on the use of safety extra-low voltage).

Criteria for selecting the optimum flexible shaft drive

The most important prerequisite for cost effective work is the selection of an optimal tool. Then a suitable tool drive can be chosen. Please take the following into consideration:

1. Design, shape and size

Every type of application places specific demands on the shape and size of the tool drive. The different designs can be used for various applications: The ideal drive should be selected for the task in hand depending on the dimensions, accessibility, type and frequency of the application.

2. RPM

The tool drive should always be selected according to the RPM and cutting speed recommendations for the tool. Please refer to catalogues 202 - 208 for these recommendations.

3. Power output

The tool drive's power output is the deciding factor for maintaining the RPM under load. The load is determined from the material to be machined, cutting capability of the tool and the grinding pressure.

4. Tool adapter

Depending on the PFERD tool you have selected, different tool adapters are available e.g. collets or threaded spindles. Every machine is allocated with matching collets. Please refer to pages 94-95 for an overview of the collets and spindle extensions.

Flexible shafts consist of three components which are combined with each other:

- a flexible core,
- a flexible casing and
- a handpiece.

Flexible core

Consists of 4 up to 10 layers of wire acc. to DIN 2076, especially designed for high speed clockwise rotation. The coupling is securely press fitted to the core. After approx. 100 operating hours, the flexible core must be re-lubricated. The core and casing must be degreased and new, special shaft grease must be applied.

Flexible casing

The flexible casing consists of oil-resistant rubber; the interior being a flat steel spiral and the outside being solid rubber. The connection couplings are pressed on firmly and encased in a rubber sheath as reinforcement.

Handpiece

The handpieces are light and easy to handle in relation to their power output transmission, and cover a wide speed range. Low-noise, easy-handling continuous operation is possible. Replaceable collets or the special shank adapter for morse cones allow various tools to be mounted. The sliding connection allows quick handpiece changes.

Maintenance

It is not possible to repair cores and flexible casings. We recommend replacement with pre-assembled new parts.

Radius of curvature

When using flexible shafts, please ensure that the shafts are not bent outside the radius of curvature. The smallest possible radius of curvature is given for each flexible shaft.

How to find the matching flexible shaft to your drive

On the following pages you will find flexible shafts and handpieces selection tables for the individual machines, each on the opposite page (left), see example below.

Flexible shafts and handpieces/attachments must always be selected according to the requirements resulting from the combination of optimum tool and drive unit with reference to RPM and power output.

① Flexible drive

Selected drive unit.

② Flexible shaft

The flexible shafts suitable for this machine.

③ Catalogue page

Reference to the catalogue page on which the appropriate flexible shaft and handpieces are shown.

④ Speed [RPM]/power output [watts]

RPM and power output ranges for which the flexible shaft is suitable.

⑤ Connection

Motor and handpiece side connections.

⑥ Suitable flexible shaft

- Ideally suitable
- Suitable
- Not suitable

⑦ Handpieces/attachments

Please select the shape and design according to your needs.

Example

Record-universal motor RUER 5/250 SI

- Totally insulated. 
- Stepless RPM adjustment.
- Digital electronic ensures constant RPM, even under load.
- Versatile use, as it can be connected to any 230 volt AC current line or to 230 volt, 50/60 Hz generator.
- High power output for fine milling, grinding and polishing work.
- Due to the light and slim handpieces, easy handling is possible.
- Start up current limiting for smooth start up.

- Pipe stand protects the machine in any position.
- Electronic switch-off on overload, restart protection on power failure.

Dimensions L x W x H:
285 x 57 x 102 mm

Ordering note:

The machine is delivered without a flexible shaft. Please order separately.
Machine with foot switch available on request.

Record universal motor RUER 10/250 SI

- Totally insulated. 
- Stepless RPM adjustment.
- Digital electronic ensures constant RPM even under load.
- Versatile use, as it can be connected to any 230 volt AC current line or to 230 volt, 50/60 Hz generator.
- High performance for milling, grinding and polishing work.
- The drive motor can be used in tool and mould construction, in precision engineering and in the DIY and hobby sectors.

- Start up current limiting for smooth start up.
- Pipe stand protects the machine in any position.
- Electronic switch-off on overload, restart protection on power failure.

Dimensions L x W x H:
300 x 75 x 140 mm

Record universal motor RUG 19/120 SI

- Totally insulated. 
- Adjustable RPM using an eccentric gear.
- Powerful work in hard-to-reach places, too.
- Pipe stand protects the machine.
- For work on medium to heavy tasks e.g. on construction sites, in repair workshops, car garages, locksmith's, in tool and mould construction, in foundries, in art workshops, in goldsmith's, in stonemason's workshops and in schools.

Dimensions L x W x H:
530 x 95 x 175 mm

Recommendation for use:

For daily, continuous operation in single or two-shift operation, we recommend our 3-phase AC current flexible shaft drives (see pages 73 and 77).

Ordering note:

The machine is delivered without a flexible shaft. Please order separately.

● Ideally suitable

○ Suitable

– Not suitable

Record universal motor RUER 8/180 SI Incl. combi-speed control KDR 8/180 SI

- For general use in milling, grinding and polishing work.
- Totally insulated. 
- Stepless RPM adjustment.
- RPM adjustment possible on running motor.
- Extremely low noise development.
- Good RPM/power output ratio.
- Particularly suitable for use in tool and mould construction.

- The combi-speed control KDR 8/180 SI can be used as a table-top or foot control. In table-top operation, the RPM can be controlled individually using the potentiometer. For foot-controlled operation, the maximum speed can be preset using the potentiometer. Control then takes place using the foot pedal.
- Only use with Motor RUER 8/180 SI.

Ordering note:

The machine is delivered without a flexible shaft. Please order separately.

Multi-Speed Machine Mini-Mammoth Electronic MMEW

The Mini-Mammoth Electronic can be used for diverse milling, grinding and polishing work.

Technical data

- Voltage 230 V, 1-phase AC current.
- Protective earthing.
- Frequency 50 - 60 Hz.
- Power input 1.100 watts.
- Power output 800 watts.
- Stepless RPM adjustment.

Special features

- Smooth start up.
- Quick and easy RPM adjustment possible on running motor.

- Good RPM/power output ratio.
- Extremely low noise development.
- Ideal for use in tool and mould construction.
- Automatic motor stop on overload.
- Mains switch with undervoltage actuator.
- Grinding and polishing tools dia. ≥ 60 mm are not suitable for continuous use with the Mini-Mammoth Electronic.

Ordering note:

The machine is delivered without a flexible shaft. Please order separately.

Hanging brackets and foot switches available on request.

QD 05 B1

The high power output Quint is suitable for general use milling, grinding and polishing work.

- Ideal for continuous use.
- Restart protection on power failure
- Drive speeds:
750, 1.400, 3.000, 6.300, 11.000 RPM.
- Dimensions L x W x H:
385 x 150/240 x 365 mm

Ordering note:

If the required voltage is not specified, we supply 3-phase AC current motors switched to 400 volt. Other voltages 42 up to 440 volt and 60 Hz are available on request, subject to an extra charge.

The drive motors are delivered without plug and flexible shaft.

Recommended use:

Grinding and polishing tools dia. ≥ 80 mm are not suitable for use with the Quint. Do not use with angle drive WT 10 H.

The Mammoth Electronic can be used for diverse milling, grinding and polishing work.

Special features

- Stepless speed adjustment (with overdrive ST 103 up to max. 36.000 RPM).
- Removable operating console with possibility for extension, e.g. hanging design, work in boilers.
- Smooth start up.
- Quick and easy RPM adjustment possible on running motor.
- High torque, even in the lower RPM range.
- Extremely low noise development due to vibration damper.
- Automatic motor stop on overload.

- Restart protection on power failure.
- Easy to service, housing with 4 easy to remove modules.

Ordering note:

ME 22/150 = 3-phase AC current
MEW 18/150 = 1-phase AC current

The drive motors are supplied without plugs and flexible shafts.

Accessories for Mammoth Electronic

(1) Remote control cable FSTK 22

For extension of the removable operating console with cover plate for protection of the motor (cable length 4 m).

(2) Foot switch FSE 22

For easy machine switch-on/switch-off (cable length 4 m) with protective cover.

(3) Base FME

Stable base with pivot device.

(4) Motor hanger B1 ME

Machine can be used in hanging position, shaft support option.

(5) Overhead trolley B2 ME

Machine can be used hanging in mobile operation.

(6) Base trolley D ME

Mobile trolley with tool tray and two lockable wheels.

(7) Shaft hanger WAL 4-12

Support for flexible shaft, can be mounted onto the side of the machine.

● Ideally suitable

○ Suitable

— Not suitable

The high power output Mammoth is suitable for general use milling, grinding and polishing work.

- Restart protection on power failure.
- Drive speeds:
850, 1.600, 2.100, 3.200, 5.700, 8.000, 12.000 RPM.
- Dimensions L x W x H:
460 x 160/240 x 400 mm

Ordering note:

If the required voltage is not stipulated, we supply the 3-phase AC current motor switched to 400 volt. Other voltages 42 up to 440 volt and 60 Hz are available on request, subject to an extra charge.
The drive motors are supplied without plug and flexible shaft.

Recommended use:

Grinding and polishing tools dia. ≥ 100 mm are not suitable for use with the Mammoth.

Drum Grinders for Flexible Shafts

Drum equipment sets for handpieces

Drum equipment set WRS 12 ZGA

For using grinding drums/rollers with the flexible shaft 12 ZGA. Using this set, the straight flexible shaft handpiece 12 ZGA can be adapted for use with grinding drums/rollers.

Drum equipment set WRS WT 10 H

For using grinding drums/rollers with the angle drive WT 10 H. Using this set, the angle drive WT 10 H can be adapted for use with grinding drums/rollers.

Recommended use:

Please refer to catalogues 204 and 208 for information regarding grinding drums and brush roller speeds.

WT 10 H G28	349250	8.500	1,2 : 1	7.100	M14	22,23	10 ZG, 12 ZGA	1,000

The overdrive ST 103 transmits the drive speed in the ratio 1 : 3. The speed is dependent on the machine speed and the diameter of the flexible shaft. Please note that the torque to be transmitted increases as the RPM increases. The power output is limited according to the flexible shaft core diameter.

Safety note:

The drive RPM must not exceed 12.000 RPM.

Maximum RPM

36.000 RPM on flexible shaft 4 ZG
25.000 RPM on flexible shaft 7 ZG / ZGU
18.000 RPM on flexible shaft 10 ZG

Ordering note:

Drive core included in delivery.

Overdrive core

Pre-assembled replacement core on request, please separately.

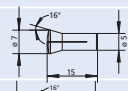

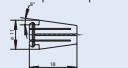

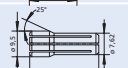

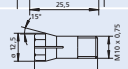

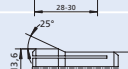

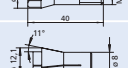

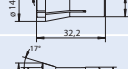

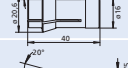

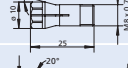

DIN 15 type for Grinding Master available on request.

With spindle extensions shafts of grinding and milling tools can be extended. They allow access to difficult to reach areas. The extensions are rounded into collet (or instead of collets) of machines (air or electric powered) or in a flexible shaft handpiece.

Spindle extensions are an cost effective alternative to special types of made to order burrs and mounted points with long shanks.

Safety note:

Caution! When using spindle extensions, please observe the valid safety regulations and the accident prevention regulations.

When working with long shank lengths, it is vital that the tool is inserted into the workpiece (e.g. cores, pipes, ducts or keyways) before the tool drive is switched on. The extension must not run free with the tool outside the workpiece (e.g. cores, pipes, ducts or keyways).

If this rule is not observed, there is an increased risk **of accidents**. If the given conditions are unfavourable, the extension with the tool clamped in it may buckle. **The extensions are only intended for manual use** in connection with suitable air-power, electric grinders or flexible shaft handpieces for tools

with standard shafts. The extension and a tool permitted for use at the appropriate RPM are clamped into an impact-free chuck. Not clamping on the shoulder radius.

Clamping of a second extension or of tools with excessive length shanks is not permitted.

Belt grinder attachment holder

BSV 25,5/24

Protective cover

BSVH 36/41

Medium-sized belt grinding attachments BSVH 36 and BSVH 41 for belt lengths 520 and 610 mm. Small belt grinding attachments BSVH 25,5 and BSVH 24 for belt length 305 mm.

■ The belt grinder attachment can be pivoted on the respective tool drive or the handpiece and therefore allows flexible adaptation to each work situation.

■ Highly-accurate belt guidance due to adjustable belt clamping force and fixable belt arms.

■ Easy, quick belt replacement due to spring clamping.

Lubricating oil for air power machines for oil mist lubrication

Protects against icing up; good spray qualities.

Special properties:

- Good lubrication qualities
- Low viscosity
- Corrosion protection
- Highly water-resistant

Ball bearing grease FT 5

For all ball bearings. Light moistening of grease slingers to protect them against dust.

Gear grease FT 3

For flexible shaft machine gears, angle drives and angle handpiece gears.

Lubricants

Order No.	Description	EAN 4007220	Content	Use for	
5 Liter ONG OEL	Special lubr. oil	179321	5 L	Maintenance unit	4,900

Special grease with special lubrication and adhesive properties for flexible shafts 4 ZG – 15 KG.

After approx. 100 operating hours, the core of a flexible shaft must be re-lubricated. The core and hose must be de-greased and the new special flexible shaft grease must be applied to the core.

Flexible shaft grease

Order No.	Description	EAN 4007220	Content	
FT 4 (500 g)	Flexible shaft grease	182963	0,500 kg	0,500

After approx. 100 operating hours, the core of a flexible shaft has to be re-lubricated. The core and hose must be de-greased and new special shaft grease must be applied to the core.

Maintenance set consists of:

1 Hose brush

For removing the old grease from the flexible casing.

2 non-linting cleaning cloths (400 x 330 mm)

The core is freed of the old grease using a de-greasing agent and a cleaning cloth (do not use cotton waste)! Apply new grease on to the second cloth and pull the core through it.

1 can of shaft grease FT 4 (approx. 0,500 kg)

Special grease with special lubrication and adhesive properties.

Personal Protection Equipment (PPE)

Safety Glasses

Safety glasses SB-5

Transparent, extremely light safety glasses which allow a clear view in all directions.

Highly impact-proof plastic lenses (polycarbonate). Due to the ultradura coating, the lens is scratch-resistant.

Advantages:

- Lies tightly against the face.
- Good protection against mechanical hazards.
- Distortion-free and low-fatigue visual quality.
- 100% UV protection.

Order No.	EAN 4007220	Lens coating		
SB-5	808665	Ultradura	5	0,335

Safety glasses SB V-5

Transparent, light and extremely comfortable safety glasses which allow a clear view in all directions. Arm and lens inclination can be fitted precisely to the individual field of vision.

Highly impact-proof plastic lenses (polycarbonate). Due to the supravision coating HC-AF, the outside of the lens is extremely scratch-resistant, and the inside is permanently fog-free.

Advantages:

- Soft contact surfaces protect the nose, forehead and ears.
- Four comfort pads for pressure-free and comfortable-fit of the frame.
- Good protection against mechanical hazards.
- Chemical resistant.
- Distortion-free and low-fatigue visual quality.
- Fog-free and anti-static coated.
- 100% UV protection.

Order No.	EAN 4007220	Lens coating		
SB V-5	808672	Supravision HC-AF	5	0,365

Safety glasses SB BT-5

Innovative, transparent, extremely light and comfortable safety glasses, which allow a clear view in all directions. Perfectly suited in particular to people already wearing glasses.

Highly impact-proof and extremely scratch-resistant plastic lenses (polycarbonate). The optidur NC coating provides high resistance against chemicals. Due to the anti-static coating, water and oil-based contamination can easily be removed.

Advantages:

- No contact between frame and existing glasses.
- Quick and easy frame adaptation.
- Particularly soft and flexible arms.
- Good protection against mechanical hazards.
- Chemical resistant.
- Distortion-free and low-fatigue visual quality.
- Fog-free and anti-static coated.
- 100% UV protection.

Order No.	EAN 4007220	Lens coating		
SB BT-5	808689	Optidur NC	5	0,385

Safety glasses SB M-2

Comfortable, transparent full-view safety glasses with panorama vision. Also perfectly suitable for people already wearing glasses. Pressure-free wear with comprehensive side protection.

Highly impact-proof plastic lenses (polycarbonate). Due to the supravision NC coating, the lens is extremely scratch-resistant both inside and outside as well as fog-free inside.

Advantages:

- Soft, flexible seal adapts to the individual field of vision perfectly.
- Excellent ventilation.
- Good protection against mechanical hazards.
- Chemical resistant.
- Distortion-free and low-fatigue visual quality.
- Fog-free and anti-static coated.
- 100% UV protection.

Order No.	EAN 4007220	Lens coating		
SB M-2	808696	Supravision NC	2	0,346

Protective gloves SensoGrip HFS and HS

SensoGrip-protective gloves provide optimum protection with maximum comfort and best finger flexibility. Viscoelastic pads on the contact surfaces damp vibrations by 30% and allow longer working times (according to DIN EN ISO 5349 parts 1 and 2).

The protective gloves SensoGrip HFS and HS are made of robust special nappa leather. They have heat-resistant, spark-resistant aramide seams. SensoGrip HFS and SensoGrip HS provide protection from mechanical injuries caused by stabs, splitters or abrasion. The elasticated wrist closes the glove firmly. Suitable for those allergic to chrome, free of hexavalent chrome.

The protective gloves packing unit are individual pairs.

Advantages:

SensoGrip HFS

- Optimum hand/finger protection.
- Ideal for grinding, cut-off and welding work.
- Available in 3 sizes: M, L and XL.

SensoGrip HS

- Optimum hand protection.
- Ideal for light grinding and polishing work, e.g. when using air powered filing machines and smaller straight grinders.
- Available in 3 sizes: M, L and XL.

Ordering example:

EAN 4007220**809273**

Fold away ear protection. Extremely low weight and comfortable fit due to oval shaped, soft foam plugs. A hygienic product, as the ear protection or ear need not be touched as it is being put in.

Advantages:

- Can be used for a continuous noise level of up to 95 dB(A) or up to 100 dB(A) impulse noise.
- Reduces the noise level by 23 dB(A) to normal conversation levels.
- Multiple- use.

BGS ear protection

Order No.	EAN 4007220	Noise reduction value SNR [dB(A)]		
BGS	808702	23	1	0,016

Secure and comfortable respiratory masks of different protection classes (protection classes 2 and 3). Can be used for welding, in particular for aluminium, casting, soldering and when working on very dusty materials and asbestos.

They provide optimum protection against dust. The respiratory air valve minimises congestion of respiratory heat and moisture.

Advantages:

ASM FFP 2-10

- Comfortable fit due to broad headband strap.
- Protects against dust **up to 10 times** the MAC and TRK limit values.

ASM FFP 3-5

- Comfortable fit via 4-point headband.
- Safe fit due to circumferential comfort sealing lip.
- The integrated nosepiece is flexible, thus ensuring that the mask fits securely, even across the nose.
- Protects against dust **up to 30 times** the MAC and TRK limit values.

MAC

= Maximum allowable concentration

TRK

= Technical reference concentration, workplace exposure limit for carcinogenic substances
